

Progress Report

As we are writing this progress report, we are still in the process of trying to complete our design to successfully run cp4-test code. Kevin and Shoun are working on the rvfi monitor initialization, while Taras is doing general debugging to pass the cp4-test code. Although our group passes the cp3 test code manually, the autograder requires the rvfi to work alongside the test code, therefore we can't submit our code just yet.

Roadmap

It seems very unlikely that we will have time to do any sort of advanced feature, so at this point we are just going to try to get cp4-test code working before the final deadline. As soon as Kevin and Shoun finish the rvfi, they will help Taras with debugging the general cp4-test code.
